

## Accoya care instructions

(Vieser Dot Accoya oiled)

(Vieser Dot Accoya waxed)

Accoya® is Radiata pine that undergoes an ecological and non-toxic acetylation process. Acetylation permanently alters the wood's chemical structure, preventing it from absorbing water. The process gives the wood unique dimensional stability, durability and consistent quality. The process also naturally protects the wood from numerous types of decay fungi. With Accoya® wood, coatings last up to three times longer than with regular wood.

Oil/wax forms a beautiful protective coating and enhances the colour of the fixture. Accoya gratings must be treated 1 to 2 times a year with a clear wood oil or white wax, depending on the grating model. When coating the wood, follow the manufacturer's instructions.
