

Kebony care instructions

(Vieser Square Kebony oiled)

Non-toxic and ecologically produced Kebony wood is hard, durable and beautiful. FSC-certified Nordic pine is the main material used. Kebony wood is impregnated with a bio-based alcohol that is a byproduct of sugar production. The treatment process results in a product that is durable and absorbs almost no water. The process alters the wood's molecular structure, but does not emit chemicals that are harmful to the environment.

Oil forms a beautiful protective coating and enhances the colour of the grating. Kebony gratings must be treated 1 to 2 times a year with a clear wood oil. When treating the wood with oil, follow the manufacturer's instructions.
