

vieser

Simply smart living

This brochure has been translated from the version used in Finland and the products presented are the ones from the Finnish product portfolio.

Ostrobothnia, 15.12.2007

"At Vieser, we believe that nothing is impossible and that everything can be done just a little bit smarter."

Erkki Jyllilä, Founder

Dreams of a better bathroom – it all started in Kauhajoki

Getting water reliably and safely out of a home's wet spaces is a common problem and one that Erkki Jyllilä decided to focus on way back in 1973. The young and talented mechanical engineer established the Vieser company and transformed floor drains by making them easy to install and maintain. We are a family company based in the Ostrobothnia region of western Finland, and all our operations and production – from design to finished product – take place in Finland.

Besides the drain solution itself, we are now also focussed on developing drain covers that play a prominent role in a home's interior design. Vieser's floor drain system is a very functional and beautiful design product that brings ease and joy to everyday life.

“We are very proud
of this little Finnish
heart beating in
millions of bathrooms,
guaranteeing smooth
water flow.”

Annika Jyllilä-Vertigans

We started where people don't tend to look...

Our focus has always been on pioneering solutions that are the most reliable and easy to install, maintain and live with. Over our 50 years we have excelled at problem solving, setting new norms again and again. We have refined the Vieser drain system under the surface, and are creating more and more designs also above the surface.

...now we expand
further to define
tomorrow's bathrooms.

The homes we plan, dream and create are influenced by change all around us. We want our homes to reflect our identities, and that means that tomorrow's bathrooms should give more space for self expression. That is why Vieser focuses on smart solutions for better living. We want to offer you more design options for tailoring and changing your interior on your own terms. All to allow simply smart living.

”We are changing people’s conceptions – making floor drain gratings a part of shower room design and architecture.”

Saku Sysiö

A new dimension in interior design

Bathrooms have taken on a new role in people’s lives. And so has Vieser’s way of responding to people’s needs through design. Our focus in the beginning was to design the perfect floor drain. Today, we also design floor drain covers that complement the decor of thoughtfully designed, beautiful spaces.

We have introduced design drain covers with shapes and materials that are revolutionising the entire range of products available on the market. In the design process, we co-operate closely with the top Nordic design firms **Aivan Design** and **Pentagon Design**. Our range of drain covers gives designers and interior decorators options for bringing an element of surprise and a unique touch and joy to bathrooms.

“It’s time to make this bathroom necessity a virtue to be desired.”

Arni Aromaa

Freedom to choose based on your personal style

Quality design is changing people's conceptions. Our unique design drain covers blend in seamlessly with the surrounding bathroom design elements and transform traditional perceptions of floor drains.

The covers are designed to live up to the criteria of both professionals and home owners. They enable both the use of large floor tiles and flexible material choices. Home owners and designers can choose to either highlight the drain cover as an elegant design element or have it blend in almost imperceptibly with the rest of the floor. Vieser floor drains give you the freedom to design your bathroom based on your personal style.

Ingenious simplicity is beautiful

The best things in life are often the most simple – this also applies to the installation of our drains. In any bathroom, the foundation for everything is safety and reliable waterproofing. That is why we have designed our floor drains to be ingeniously simple and safe to install. And best of all, every drain product in our wide range is compatible, making the best choices possible for both the floor surface and under the floor in diverse projects. This union of design and functionality is a designer's and installer's dream.

The unbearable lightness of everyday life

It's the small things in life that bring quality to living – but only when they work. Otherwise, they may complicate people's already busy days. Easy and infrequent cleaning probably does not top the list of criteria when choosing a drain solution. But it is precisely that feature of our floor drains that makes everyday life easier.

Carefree shower moments, if anything, are an everyday luxury. Water is quickly drained away from the floor and, thanks to the structure of our drains, the flowing water efficiently carries most of the dirt away with it. That is also why our drains do not need to be cleaned as frequently as other drains. And when that cleaning day finally does arrive, the drain can be washed and the water trap rinsed quickly and easily. You can trust in the drain's effectiveness and simply enjoy your bathroom.

A touch of nature in your bathroom

Natural wood underfoot and the soft sounds of water falling on the drain cover – what more can you ask for in a shower experience? We have broken new ground in using wood on bathroom floors in an entirely new way. Our non-toxic and ecologically produced **Kebony** design covers are made of strong, durable and beautiful wood. Kebony-wood material has been granted the Nordic Swan Ecolabel.

Thanks to the unique treatment process they undergo, both wood products have excellent water-resistant properties for use in bathrooms. The timeless and beautiful wood covers put the finishing touch on any bathroom.

Stainless steel lends an elegant twist

Steel is a familiar, stable and durable material in bathroom floors. It suits many styles and is the ideal choice for a drain cover, either tiled or moulded. We have introduced matte black design covers alongside our traditional square steel covers.

Our tiled steel covers open up many opportunities. When the drain cover is tiled with the same tile as the surrounding floor, it practically disappears, giving the bathroom a harmonious look. Alternatively, the cover can be highlighted as a design element by opting for a different tile than the one used on the floor. We offer covers of different shapes and sizes, and you choose their style.

Vieser Line

Design value & user experience

This new-generation floor drain system serves the style and quality conscious interior designer and operates with excellent functionality. Vieser Line, designed and manufactured in Finland, fits with all Vieser One floor drains, and offers multiple alternatives for installation. High quality design meets a great user experience.

Vieser Line

- Vieser Line grating
- Vieser Line frame
- Clamping ring
- Extension Ring
- Removable water trap
- Vieser One horizontal floor drain

Patented, safe and reliable.
Compatible with all Vieser One floor drains, meaning the water trap is easy to clean and reinstall.

The Vieser Line product line has two cover alternatives: stylish stainless steel cover and the discrete tiled cover.
Can be installed next to the wall or in the centre of the floor.

Vieser One

Fluency and peace of mind

We believe it is important for our products to be easy to work and live with. During the design stage, we thought how to best combine ease, installation and functionality for everyone who has dealings with Vieser. This is our way of creating extra value for our partners and fluent everyday requirements for end users. This is why we are constantly developing our solutions.

Quick & easy installation

Saves up to 15 minutes!

Angled outlet for better drainage speed.

Fitting is quicker with integrated adjustable legs.

Designed to be fitted on both concrete and wooden floor bases.

New water trap. Easier to take out and put back.

New integrated cutting template. Also to be used for clamping ring installation.

New angled protective lid with an angle. Makes flooring easier.

Vieser One

- Stainless steel grating
- Adjustable stainless steel frame
- Clamping ring
- Membrane flange
- Extension ring
- Removable water trap
- Vieser One horizontal floor drain

100%
Certified

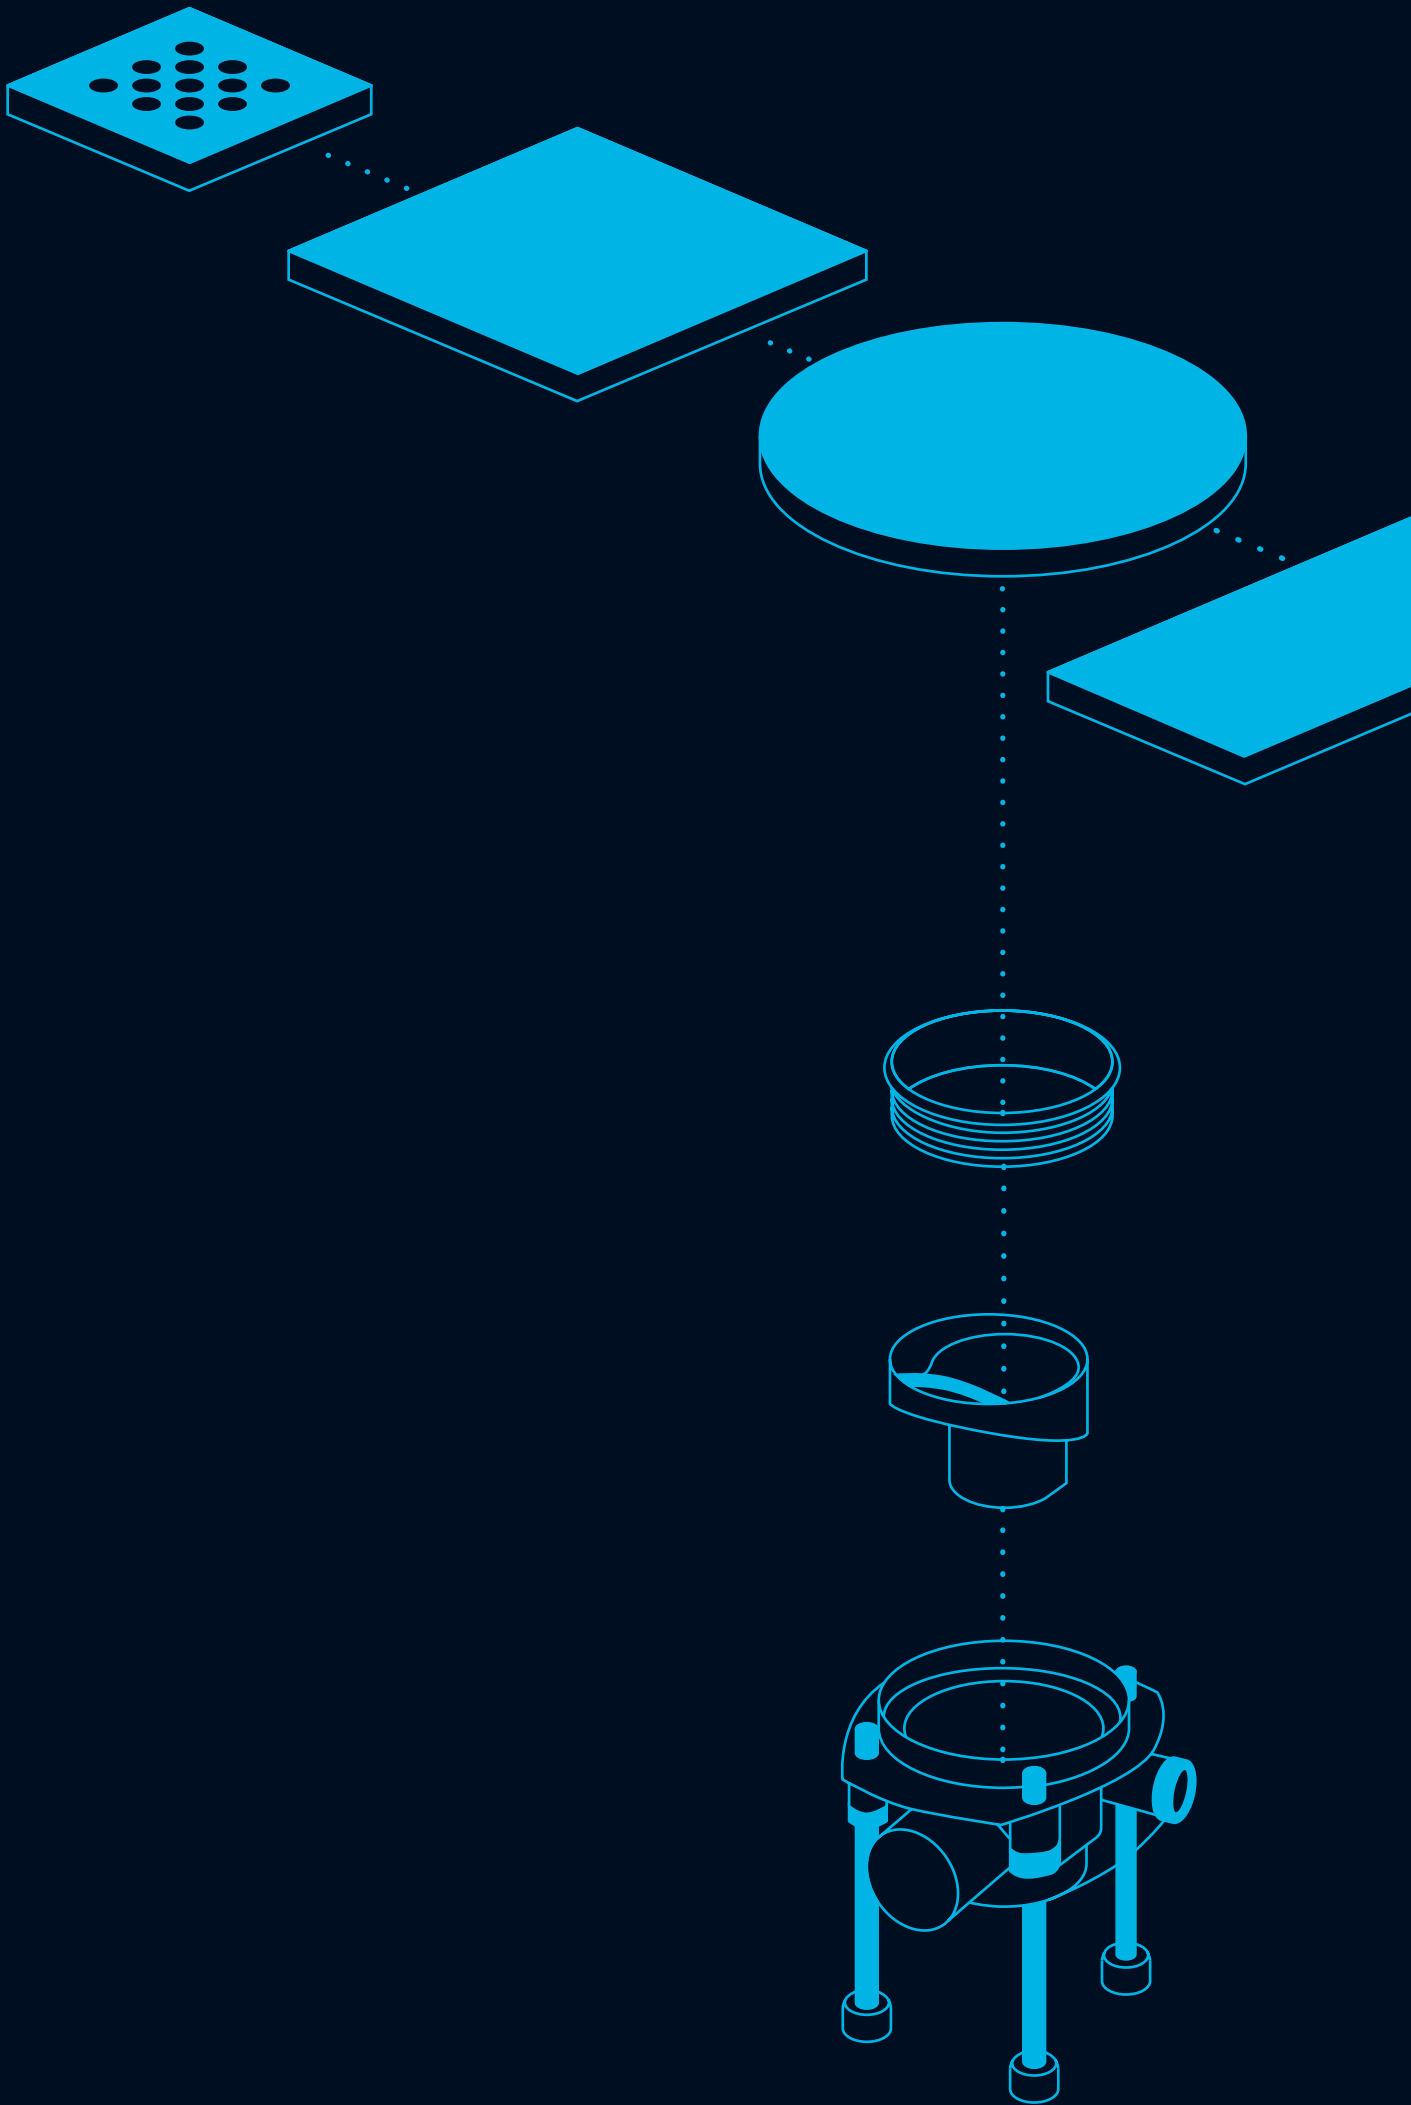

All our products are
type-approved.

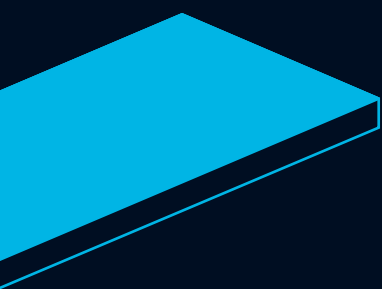

Stainless steel gratings

Our stainless-steel gratings are fully compatible with all our drains and extension rings.

- Firm and pleasant under foot – stays firmly in place
- Timeless and stylish design
- All 197 x 197 mm standard covers have type approval

Our team is at your service

All of us here at Vieser are happy to be part of making small and big dreams come true. We do this by offering new options, responding to changing preferences, meeting the needs of professionals and bringing joy and inspiration to home owners – for a smoother everyday life.

Together let's make your dream bathroom a reality!

For over five decades we have focused on customer-centric product design, creating meticulously thought-through, reliable products, which ease our customers' everyday experience.

Now we aim even higher. With smarter solutions and evolved designs, we support people's interior design dreams and encourage inspired, sustainable, choices.

Together with our partners, we set the norms for the bathrooms of tomorrow.

–Annika Jyllilä-Vertigans, CEO, Vieser
